

USE-CASE FLOW SPECIFICATION

UC-04 – Reserve Pickup Window

Primary Actor	Shelter Coordinator
Secondary Actor	Donor Partner
Preconditions	Shelter coordinator is authenticated and verified; selected batch is active, available, and not expired.
Postconditions	Batch is reserved, pickup window is recorded, and a unique verification code is generated for authorized parties.

Main Success Scenario

1. The Shelter Coordinator opens the list of active surplus food batches.
2. The system displays available batches with quantity, dietary tags, location, and expiry countdown.
3. The Shelter Coordinator selects a suitable batch.
4. The system validates that the shelter is verified and that the batch is still available.
5. The Shelter Coordinator selects an available pickup window before the expiry time.
6. The system creates the reservation and marks the batch as reserved for the selected shelter.
7. The system generates a unique pickup verification code.
8. The system displays the confirmation, selected pickup window, and verification code to the Shelter Coordinator.
9. The Donor Partner can view the confirmed reservation status and verification code for the handover.
10. The use case ends successfully.

Alternate Flow – Batch Expired or Already Reserved

- At Step 4, if the batch has expired or has already been reserved, the system rejects the reservation.
- The system displays the reason and removes the batch from the reservable list.
- The Shelter Coordinator may return to the active-batch list and select another batch.

Requirement traceability: FR-002, FR-003, FR-004 and FR-005.
